

Project Profile

Alamosa Family Recreation Center

Location: Alamosa, Colorado

Project: Used

Type of Venue: Semi-Enclosed Outdoor

Product features:

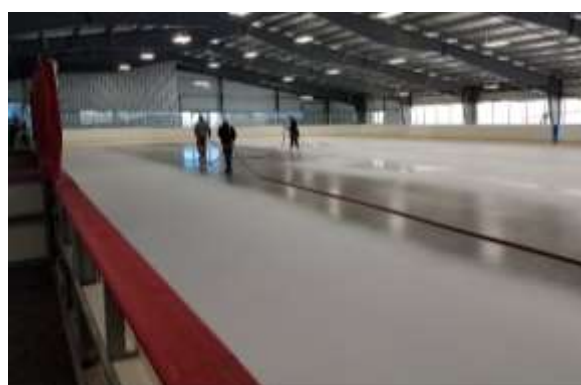

BAP6.0 Steel Framed Used Dasher Boards

Project background:

With their outdoor rink at the mercy of the weather, varying temperatures in Alamosa, Colorado constantly put the length of their skating season in jeopardy.

The city decided to relocate and invest in a multi-purpose, partially covered seasonal refrigerated ice rink suitable for skating five months of the year. Roller derby, community events, and expositions would occupy the space in the remaining, warmer months. To keep the facility affordable, the city of Alamosa looked to the expertise of Becker Arena Products for solutions for their dasher board system.

Becker recommended the city consider purchasing boards recently taken in on trade through its used division, Rink Equipment Resource, and worked with Alamosa to retrofit the boards to meet their needs.

The new facility is an exciting new benefit for the community. It is everything residents and project managers could have hoped for, and the timing could not have been better. Had the city kept its existing rink the way it was, they would have had zero skating days this season. With the help of Becker Arena, skating remains an affordable winter pastime for Alamosa residents.
