

Project Profile

St. Croix Valley Recreation Center

Location: Stillwater, Minnesota

Client: Municipal

Type of Project: Renovation

Type of Venue: Community

Products/Supplies: One BAP6.0 Signature Series Dasher Board System with Powder Coated Shield Supports, Poly Closure Angle, Netting, and Custom Protective Wall

Background:

The St. Croix Valley Recreation Center is home to two NHL sized ice sheets and an outdoor seasonal skating area. One of their indoor sheets was in need of a facelift, and along with a new steel dasher system, Stillwater upgraded to red powder coated shield supports and added black poly backer to reflect the high school's colors. We also installed a black and red poly closure angle and water bottle shelf.

The biggest challenge for this rink was the need to protect patrons changing skates in the seating area just behind the access gate without obstructing the spectators' view. A custom clear poly dasher wall with shielding was installed to solve this issue.
