HOW TO CHOOSE THE RIGHT FLOORING FOR YOUR FACILITY

It is not always about budget, although that is sometimes the driver. Other considerations are environmental conditions, application and installation. Discuss with your Becker Arena Products, Inc. Sales Consultant and compare products. Protective flooring is often a major financial component in your renovation or new construction project.

START BY ASKING THESE SIX QUESTIONS

PLAN AHEAD

1. Is there a budget dollar range you are working within?
2. What is the total square footage you need to cover?
3. What kind of look are you trying to convey?
4. How long does this surface need to last? (or how long do you want it to last)
5. How is the room/area being used? (skate or foot traffic, fitness)
6. Tell us about the room/area location. (temperature, moisture)

WHAT THICKNESS DO I NEED?

There are recommended industry standards based on your application. Becker Arena Products, Inc. offers product in several thicknesses required for both ice rink skate traffic, foot traffic, training/weight rooms and fitness centers.

LOOSE LAY OR GLUE DOWN?

The decision to loose lay or glue down your flooring may depend on your application. Most indoor ice rinks will glue down their flooring. A benefit to a glue down application is to prevent the floor from moving and getting moisture underneath. If you have an area that is multipurpose, you may want to consider a loose lay or interlocking application so the floor can easily be pulled up and stored.

WHAT IS MOISTURE MITIGATION?

Moisture mitigation can be a necessary process for ice rinks during a renovation or new construction project to prepare your surface before flooring installation. It is vital that a moisture test be completed prior to floor installation. Moisture is the single most significant factor that causes bonding failure to the sub-floor. Moisture tests must be taken on all concrete floors regardless of age and grade level.

SPORTFLOOR® PERFORMANCE RUBBER FLOORING

Durability and Design for High Performance Manufactured from the highest quality rubber, SportFloor features an extra tough, slip-resistant and easy-to-clean surface specifically designed to withstand even the most demanding arena surface needs. Plus, available in a wide variety of colors, SportFloor offers full customization capabilities to fulfill the branding and design requirements for a variety of ice rink applications.

With three versatile product lines – Stamina, ReAction and ProXL – SportFloor is the complete package provider for all of your ice rink, weight room and fitness center flooring needs.
