Instructions

Tools:

Not included: Hammer

Included: 2 ratchet straps

Allow yourself 30-60 mins the first time you set up your CROXICE Rink Divider Panels

Step 1. Unload panels from storage cart and slide on to center red line according to drawing

Step 2. Connect the male and female components together on each panel. Do not start in the middle.

ALWAYS work from both corners (ends) and meet in the middle.

Step 3. Attach ratchet straps to eyebolts on the inside of the radius end sections and tighten corners together.

Note: Your system has been pre-assembled in our factory to assure a good fit however your ice will probably not be as level as our concrete floor which means periodically, you may need a hammer to lightly tap the connections up or down to fit.

A. Reverse to disassemble

B. Stack your straight sections on the cart first, and then your gate panel with the hinge side up to avoid scratching the panel underneath it. Curved sections go on last.

C. Use ratchet straps to secure panels to the carts when not in use
